PROFILE

Detail-oriented software engineer and BSc Computer Science graduate with practical experience across the full data lifecycle — from database design and SQL querying to building and evaluating machine learning models. Comfortable working in Python, cleaning and reconciling real-world data, and validating figures and logic before they are shipped or shared, having done exactly this while configuring ERP systems and building data-driven applications. Highly organised, methodical, and persistent with detailed, repetitive work, with strong documentation habits and an existing interest in applying AI-assisted tools carefully and responsibly — while always checking outputs against source data. Motivated to bring this foundation to African energy and development data work.

CORE DATA SKILLS

- Python for data work
- SQL querying & joins (MySQL)
- Data cleaning & standardisation
- Reconciling inconsistent records
- Descriptive statistics
- Charts & basic data visualisation
- Metadata & documentation discipline
- Quality checks & validation
- Spreadsheets (Excel/Sheets)
- AI-assisted analysis, source-checked

Built directly through machine learning proof-of-concept projects, ERP data configuration and validation work, and day-to-day backend development requiring accurate, well-structured data.

RELEVANT PROJECTS

Student Performance Prediction System

- Built an end-to-end machine learning project with measurable evaluation metrics, covering data preparation, cleaning, feature handling, model training, and result validation.
- Reviewed outputs against expected patterns in the data to catch errors before drawing conclusions — the same discipline needed to replicate and check published figures.

Intelligent Content Recommendation System

- Developed a recommendation engine using Scikit-learn/TensorFlow, involving structured data processing and iterative model evaluation.

Amazon PartyRock AI & Data Analysis Exercises

- Worked through applied exercises in AI app-building and data analysis, reinforcing careful, source-aware use of AI tooling.

PROFESSIONAL EXPERIENCE

Software Engineer — Evu Ventures (Remote, New York) **Jan 2026 – Present**

- Work with structured application data daily, writing and validating SQL queries and ensuring data returned through APIs is accurate and consistent.
- Maintain clear documentation and version-controlled records of changes, following disciplined, repeatable processes.

AI Trainer — Mizani Innovation Hub **Sep – Dec 2025**

- Evaluated AI model outputs against defined quality criteria, documenting findings with precision — direct experience in the "check AI outputs against source" discipline this role requires.

Web Development & ERP Intern — Softlink Options **May 2025**

- Supported ERP data and content updates, checking entries for accuracy and consistency before they went live.

Software Engineer Intern — AppKings Solutions Ltd **May – Aug 2024**

- Built a student management module and loan repayment system (C#/.NET, MySQL), designing database schemas and writing SQL queries to keep records accurate and query-ready.
- Configured Microsoft Dynamics 365 Business Central (AL language), reconciling business data against defined requirements — comparable to standardising and coding real-world datasets.

PROBLEM-SOLVING & RIGOUR HIGHLIGHTS

- Built a CSV parser from scratch in TypeScript, explicitly handling quoted fields, escaped characters, and edge cases — the same care needed when reconciling messy, inconsistently formatted source files.
- Diagnosed and resolved a production data/configuration defect (Laravel APP_KEY and file-storage issue) by tracing the problem through logs to its root cause rather than patching symptoms.
- Debugged an authentication configuration mismatch (Google OAuth/NextAuth) through systematic, step-by-step verification.

TECHNICAL SKILLS

Python **SQL / MySQL** **Scikit-learn / TensorFlow** **Data Cleaning & Validation** **Git & GitHub**
Django **C# / .NET** **REST APIs** **Spreadsheets** **AI-Assisted Tooling**

SOFT SKILLS

Highly Organised **Accurate & Detail-Oriented** **Persistent with Repetitive Tasks**
Clear Written & Verbal Communicator **Strong Documentation Habits**
Asks for Help When Data Is Ambiguous

EDUCATION & CERTIFICATIONS

BSc Computer Science — Karatina University (Sep 2021 – Oct 2025)
AWS GenAI and ML Foundations certifications, plus additional certifications in AI/ML and software development from Anthropic, Udacity, Cisco, and eMobilis.
