PROFILE

Software engineer transitioning into a dedicated QA Engineer role, bringing hands-on developer experience in manual, functional, and regression-style testing gained from building and validating production applications. Comfortable designing test scenarios, tracing defects to root cause, validating data through SQL, and testing REST APIs end-to-end — skills built directly from full-stack development rather than theory. A strong Python background provides a natural path into test automation (Pytest/Playwright), and prior ERP configuration and UAT exposure has built real familiarity with structured, requirements-driven test cycles inside Agile teams. Detail-oriented, analytical, and persistent when investigating failures, with a documentation-first approach to reporting and communicating findings.

CORE QA & TESTING SKILLS

- Manual & functional testing
- Regression testing
- Smoke & sanity testing
- Integration & system testing
- User Acceptance Testing (UAT)
- Exploratory testing
- Test case & scenario design
- Bug/defect reporting & tracking
- Test plans & test documentation
- Requirements validation

Applied directly while validating features at Evu Ventures, configuring and testing ERP workflows at AppKings Solutions, and supporting ERP/system checks at Softlink Options — each requiring methodical verification against expected outcomes before sign-off.

AUTOMATION, API & DATABASE TESTING

Automation testing

Strong Python foundation (Django development) provides a direct route into automation frameworks such as Pytest and Playwright; comfortable reading and reasoning through code, which shortens the ramp-up into writing and maintaining automated test scripts.

API testing

Hands-on experience working with RESTful APIs during backend development at Evu Ventures — including HTTP methods (GET, POST, PUT, PATCH, DELETE), status codes, headers, authentication, and JSON payloads — giving a practical, developer-level understanding of what to validate in an API test, with fundamentals in tools such as Postman.

Database testing

Practical SQL experience (MySQL) from building and querying application databases, including SELECT, INSERT, UPDATE, DELETE, JOINs, and aggregations — used to validate that application data, including API results, is stored and returned correctly.

PROFESSIONAL EXPERIENCE

Software Engineer — Evu Ventures (Remote, New York) **Jan 2026 – Present**

- Build and consume REST APIs, validating requests, responses, status codes, and authentication flows as part of daily development work.
- Test features manually against requirements before release, tracing defects back through the code and reporting them clearly.
- Work within a distributed, Agile-style team, collaborating with developers on fixes and follow-up verification.

AI Trainer — Mizani Innovation Hub **Sep – Dec 2025**

- Evaluated AI model outputs against defined quality criteria and wrote structured feedback — the same rigor as classifying defects by severity and documenting expected vs. actual results.

Web Development & ERP Intern — Softlink Options **May 2025**

- Verified ERP system outputs and content/data updates against expected results, flagging inconsistencies before they reached end users.

Software Engineer Intern — AppKings Solutions Ltd **May – Aug 2024**

- Configured and tested Microsoft Dynamics 365 Business Central (AL language) against business requirements — direct exposure to structured UAT-style validation.

- Built and tested a student management module and loan repayment system (C#/.NET, MySQL), writing SQL queries to confirm data accuracy and checking logic against expected outcomes.

TESTING & PROBLEM-SOLVING HIGHLIGHTS

- Completed a TypeScript CSV-parser challenge from scratch, deliberately handling quoted fields, escaped characters, and edge cases — the same boundary-condition thinking used in exploratory and edge-case test design.
- Diagnosed and resolved a Laravel production defect (APP_KEY cipher error, ephemeral filesystem issue) by reproducing the issue, reading logs, and isolating the root cause — a full reproduce-investigate-resolve cycle.
- Debugged a Google OAuth / NextAuth redirect mismatch by systematically testing the authentication flow across configuration states until the fault was isolated.

CI/CD, VERSION CONTROL & AGILE DELIVERY

Regular Git/GitHub user for version control across all projects, comfortable with branching and commit workflows that plug into CI/CD pipelines. Understands the code → repository → automated tests → deployment flow from a developer's side, including reading test/build logs to diagnose failures. Has worked within Agile-style team structures (sprints, task tracking, iterative delivery) across internships and current role, and understands the QA role in sprint planning, standups, backlog refinement, acceptance criteria, and the bug lifecycle — not only end-of-cycle testing.

BUG TRACKING, QA TOOLS & NON-FUNCTIONAL AWARENESS

Experienced writing clear, structured issue reports (title, environment, steps to reproduce, expected vs. actual result, severity, supporting evidence) through bug-fixing work across Laravel, Next.js, and ERP projects; comfortable adapting this into formal tools such as Jira, Azure DevOps, TestRail, or GitHub Issues. Basic working awareness of non-functional testing areas — performance, load, security, usability, and accessibility — and practical experience verifying responsive, cross-device behaviour while building WordPress and web applications that needed to work consistently across browsers and screen sizes.

TECHNICAL SKILLS

SQL / MySQL **REST API Testing** **Postman (fundamentals)** **Python (Pytest-ready)** **Git & GitHub**
C# / .NET **Laravel / PHP** **Next.js / JavaScript** **Agile Team Environments**
Cross-Browser / Responsive Verification **AI-Assisted Development**

SOFT SKILLS

Detail-Oriented **Analytical** **Curious & Investigative** **Clear Communicator** **Persistent Problem-Solver**
Collaborative with Developers **Strong Documentation Habits**

EDUCATION & CERTIFICATIONS

BSc Computer Science — Karatina University (Sep 2021 – Oct 2025)
AWS GenAI and ML Foundations certifications, plus additional certifications from Anthropic, Udacity, Cisco, and eMobilis.
