PROFESSIONAL SUMMARY

Computer Science graduate with a Python-focused software engineering background and practical experience working with SQL databases, data modelling, ETL concepts, query optimisation, data analysis, machine learning workflows, REST APIs, and cloud technologies. Experienced in transforming structured data into usable application and ML outputs using Python, Pandas, NumPy, Scikit-learn and SQL, with exposure to AWS data/ML services, Docker, Linux, Git and CI/CD practices. Strong foundation for developing reliable batch data workflows and data products, with particular interest in large-scale data processing, streaming systems, orchestration and cloud data platforms.

DATA ENGINEERING & TECHNICAL SKILLS

Programming & Data: Python, SQL, Pandas, NumPy, Scikit-learn, TensorFlow, Jupyter Notebook

Data Engineering: ETL/ELT concepts, data pipeline concepts, batch processing concepts, data cleaning, data preparation, feature engineering, data modelling, data quality, workflow optimisation

Big Data & Streaming: Understanding of distributed data-processing concepts; actively developing proficiency in Apache Spark, Kafka and streaming architectures

Databases: MySQL, PostgreSQL, SQLite, relational data modelling, SQL querying, schema design, database administration fundamentals, query and performance optimisation

Cloud Data Platforms: AWS EC2, S3, SageMaker basics, GCP/Vertex AI, Google Colab; exposure to cloud-based data and ML workflows

Orchestration & Infrastructure: Pipeline orchestration concepts, Airflow concepts, Docker basics, Kubernetes concepts, CI/CD basics, Linux command line

APIs & Systems: REST API design, Django, Flask, FastAPI concepts, Node.js, PHP, authentication, third-party integrations

Data & ML Workflows: EDA, feature selection, model training and evaluation, collaborative/content-based filtering, reproducible notebook workflows

Engineering Practices: Git/GitHub, code review, debugging, root-cause analysis, documentation, performance and scalability, team-based development

PROFESSIONAL EXPERIENCE

Software Engineer | Evu Ventures | Remote | Jan 2026 – Present

- Develop and maintain production RESTful services across Node.js and PHP, applying structured API design, schema validation and error handling.
- Optimise MySQL/PostgreSQL queries and refactor backend code to improve performance and scalability, strengthening database and data-access engineering skills.
- Work across backend, database and frontend layers to investigate defects, perform root-cause analysis and resolve cross-stack production issues.
- Integrate authentication providers and payment services while maintaining secure, reliable data flows.
- Collaborate through Git branches, pull requests and code reviews in a team software-development workflow.

Data Engineer | Mizani Innovation Hub | Nyeri, Kenya | Jan 2025 – Dec 2025

- Worked with Python-based data and machine-learning workflows, covering data fundamentals, model training, Scikit-learn and practical data analysis concepts.
- Developed hands-on exercises involving data preparation, feature-oriented workflows and evaluation of machine-learning outputs.
- Used Python and ML tooling to demonstrate how structured data can be transformed into models and actionable insights.
- Communicated technical data and AI concepts clearly to learners and supported troubleshooting during practical exercises.

Web Development & ERP Intern | Softlink Options | Nairobi, Kenya | Aug 2024 – Dec 2024

- Worked with Odoo's Python-based framework and relational business data across Sales, CRM, Inventory and Invoicing modules.
- Supported hosting, domain configuration and deployment activities, gaining exposure to operational environments and system reliability.
- Executed SEO activities and monitored performance metrics using Google Analytics, working with structured performance data.

Software Engineer Intern | AppKings Solutions Ltd | Nairobi, Kenya | May 2024 – Aug 2024

- Developed a student management module and loan repayment system using structured backend development practices.
- Integrated C#/.NET applications with MySQL and applied relational data modelling and SQL query optimisation.
- Worked with application data structures and database logic relevant to transactional and financial systems.

DATA ENGINEERING / ML PROJECTS

Intelligent Content Recommendation System | Python, Django, Pandas, NumPy, Scikit-learn

- Built a full-stack recommendation application and engineered data features using Pandas and NumPy.
- Implemented collaborative and content-based recommendation models and evaluated results using precision and recall.
- Exposed ML predictions through Django REST endpoints backed by a relational database and ORM.

Student Performance Prediction System | Python, Pandas, Scikit-learn, Matplotlib

- Prepared and analysed academic and behavioural data for classification modelling.
- Performed exploratory data analysis, feature selection and model evaluation using accuracy and F1-score.

Youth Financial Assistance System | Relational Database, SQL, Backend Development

- Built a savings and loan management system with relational data models and financial business logic, providing practical exposure to transactional and financial datasets.

EDUCATION

Bachelor of Science in Computer Science | Karatina University | Sep 2021 – Oct 2025

CERTIFICATIONS

- Claude 101 — Anthropic | Jul 2026
- AI Fluency: Framework and Foundation — Anthropic | Jul 2026
- AWS AI Practitioner Challenge — Udacity | Apr 2026
- AWS AI & ML Scholars – 2026 Challenge Completion — Udacity | Mar 2026
- Ethical Hacker — Cisco | Dec 2025
- Certified Web Professional – Web Developer (CWP) — eMobilis Mobile Technology Institute | Aug 2025
- AWS Educate Machine Learning Foundations — AWS | Jul 2025
- Introducing Generative AI with AWS — Udacity | Jun 2025
